

Clinical Quality Measures for Meaningful Use

The public and federal and state agencies are watching healthcare performance more closely than ever. Without proper reporting, reimbursement is also at risk. To leverage information and improve quality, Quantros offers the Regulatory Reporting Management (RRM) solution. Now certified for Meaningful Use (MU), Quantros enables organizations to achieve compliance and receive full reimbursement.

Clinical Quality Measures Expertise

With a stellar track record of submission success for our clients, we understand the nuances of quality data reporting to the Centers for Medicare & Medicare Services (CMS) and other agencies. Clinical Quality Measures (CQM) reveal how well a provider delivered services to a patient. We will ensure the accurate calculation of CQMs and successful data submission -- just as we have done for Core Measures.

Meaningful Use

Meaningful Use requirements are reshaping the healthcare industry. We offer more capabilities than any electronic health record vendor and we are your MU partner and guide for the long-term. We successfully completed the technical testing and certification of Quantros RRM™ for MU Stage 1 with the Drummond Group*.

Our certified RRM module will support the data importation, validation and submission of 15 eMeasures in the following categories:

- Venous Thromboembolism (VTE)
- Emergency Department (ED)
- Stroke (STK)

Quality reporting via certified modules will support MU certification, and reimbursement. As eMeasures deployment increases, Quantros performance reports will enable you to identify and monitor areas for improvement. Quantros summary performance and drill-down capabilities will drive future results for eMeasures, just as they have done with Core Measures.

**Quantros RRM Certified Quality Modules are 2011-2012 compliant and have been certified by an ONC-ATCB in accordance with the applicable certification criteria adopted by the Secretary of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services or guarantee the receipt of incentive payments. RRM-Regulatory Reporting Manager Version 6, Certificate number 06092011-1166-6.*

Quantros RRM

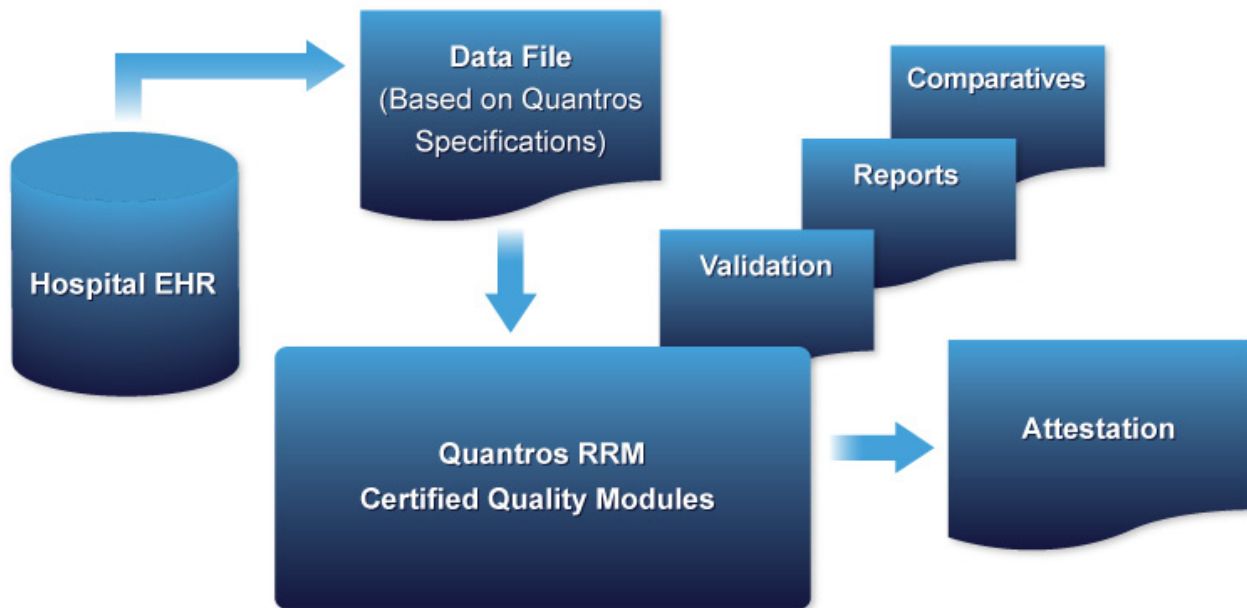

This cloud-based suite captures, aggregates and analyzes quality and performance data. Quantros RRM™ also streamlines data management for submission to state and national healthcare quality initiatives and supports internal review. It offers:

- Data validation
- Checkpoints EHR systems can't provide
- Identification of improvement areas

Stage 1 Meaningful Use Compliance

For Stage 1 MU compliance, RRM will use the data and processing flow mapped shown below.

Figure 1: Stage 1 MU Compliance (2011).

Quantros knows quality reporting and will continue to help clients meet the diverse and ever-evolving requirements of regulatory and reimbursement reporting.
